January, 1914. The first of the year was a very dry one, with only a few light showers of rain.

The weather was generally fine, with a few light showers of rain, and the crops were in good condition.

The weather was generally fine, with a few light showers of rain, and the crops were in good condition.

1. The first part of the paper is devoted to a general discussion of the problem of the existence of solutions of the system of equations

$$\frac{dx}{dt} = A(x)u, \quad \frac{dy}{dt} = B(y)v, \quad (1)$$

where $A(x)$ and $B(y)$ are matrices depending on x and y respectively, and u and v are control functions.

It is assumed that the matrices $A(x)$ and $B(y)$ are continuous and bounded in the region of interest.

The second part of the paper is devoted to the study of the problem of the existence of solutions of the system of equations

$$\frac{dx}{dt} = A(x)u, \quad \frac{dy}{dt} = B(y)v, \quad (2)$$

where $A(x)$ and $B(y)$ are matrices depending on x and y respectively, and u and v are control functions.

It is assumed that the matrices $A(x)$ and $B(y)$ are continuous and bounded in the region of interest.

The third part of the paper is devoted to the study of the problem of the existence of solutions of the system of equations

$$\frac{dx}{dt} = A(x)u, \quad \frac{dy}{dt} = B(y)v, \quad (3)$$

where $A(x)$ and $B(y)$ are matrices depending on x and y respectively, and u and v are control functions.

It is assumed that the matrices $A(x)$ and $B(y)$ are continuous and bounded in the region of interest.

The fourth part of the paper is devoted to the study of the problem of the existence of solutions of the system of equations

$$\frac{dx}{dt} = A(x)u, \quad \frac{dy}{dt} = B(y)v, \quad (4)$$

where $A(x)$ and $B(y)$ are matrices depending on x and y respectively, and u and v are control functions.

It is assumed that the matrices $A(x)$ and $B(y)$ are continuous and bounded in the region of interest.
